

T Level Information Guide

What are T Levels?

T Levels are 2-year courses designed for students aged 16-19. Each course combines classroom learning with practical, hands-on industry experience. Every T Level also includes a minimum of 45 days on an industry placement with a real employer, giving students first-hand experience of daily workplace tasks alongside the skills employers are looking for.

Course Structure

T Levels are structured around a mix of classroom study and workplace experience. Students spend approximately 80% of their course in classroom learning and the remaining 20% on industry placement days, ensuring a strong balance between theory and real-world application.

- 80% classroom-based learning
- 20% industry placement days
- A minimum of 45 days of work placement with a real employer
- Development of teamwork, communication, and technical skills

T Level Subjects

T Levels are available across a range of industries. Each pathway is designed to build both practical and technical skills relevant to that sector, while every course follows the same core structure of classroom learning combined with an industry placement. Below is an overview of each subject area, what students can expect to learn, and where the qualification can lead.

Digital

Develop digital and technical skills that can help prepare you for a career in technology.

What you'll learn:

- Programming and coding
- Cyber security
- Networking
- Digital systems
- Software development
- Data management

Where it can lead:

- Software developer or junior programmer
- Cyber security analyst
- Network technician
- Data analyst
- Progression to a digital-related university degree or apprenticeship

Business

Learn about business, teamwork and the skills needed in a modern workplace.

What you'll learn:

- How organisations are structured and run
- Marketing, sales and customer service
- Business finance and budgeting basics
- Project management and teamwork
- Workplace communication and professionalism

Where it can lead:

- Business administrator
- Marketing or sales assistant
- Project coordinator
- Entrepreneurship and starting a business
- Progression to a business degree or higher apprenticeship

Finance

Learn about money, accounting and financial services and develop skills for the finance industry.

What you'll learn:

- Principles of accounting and bookkeeping
- Financial services and banking
- Risk, compliance and regulation
- Budgeting, forecasting and financial reporting
- Use of financial software and tools

Where it can lead:

- Accounts or finance assistant
- Trainee accountant
- Banking or insurance roles
- Payroll administrator
- Progression to a finance or accounting degree apprenticeship

Media

Develop creative, technical and communication skills for a career in media, broadcasting and production.

What you'll learn:

- Video, audio and photographic production
- Media planning and pre-production
- Editing and post-production techniques
- Storytelling and content creation
- Working to briefs, deadlines and audiences

Where it can lead:

- Production assistant
- Camera operator or editor
- Content creator or social media assistant
- Broadcast or journalism roles
- Progression to a media, film or broadcasting degree

Engineering

Develop practical and technical skills in engineering, design and problem-solving for a career in the engineering industry.

What you'll learn:

- Engineering design and computer-aided design (CAD)
- Manufacturing and production processes
- Maintenance, repair and testing of equipment
- Health and safety in engineering environments
- Problem-solving and applied mathematics

Where it can lead:

- Engineering technician
- Design or CAD technician
- Maintenance engineer
- Manufacturing operative
- Progression to an engineering degree apprenticeship

About T Levels

T Levels come in a variety of forms, from Digital to Engineering, where the course usually consists of 80% classroom learning and 20% industry placement. Every T Level includes a 45-day work placement, giving students the chance to gain on-site work experience and develop skills ranging from teamwork and communication to sector-specific technical ability.
