

Your Industry Placement

A quick-reference guide to the 45-day placement

Why the placement matters

The industry placement is one of the things that sets a T Level apart from a traditional qualification. It gives you real, sustained experience in a workplace related to your pathway, so you leave with more than just a certificate.

Before you start

- Confirm your placement dates and location with your course coordinator.
- Arrange travel and check what, if anything, your workplace requires you to bring.
- Read any induction materials your placement provider sends in advance.
- Prepare a few questions about the team and what you'll be working on.

During your placement

- Turn up on time and treat it like a real job, because it is one.
- Ask questions — supervisors expect you to still be learning.
- Keep a short daily log of tasks and skills used; you'll need this for your portfolio.
- Raise any concerns early with your placement contact or school coordinator.

Skills employers look for

Skill	Why it matters
Communication	Working clearly with colleagues and clients
Teamwork	Contributing to shared goals and deadlines
Problem-solving	Applying classroom knowledge to real tasks
Reliability	Being consistent, punctual and accountable
